

# LILLIAN CHIN

<http://lillych.in> · (404)-561-9619 · [ltchin@mit.edu](mailto:ltchin@mit.edu)

## EDUCATION

<b>Massachusetts Institute of Technology (MIT)</b> <i>PhD in Electrical Engineering and Computer Science</i>	<b>2017 - 2022 (expected)</b> <i>Cambridge, MA</i>
<b>Massachusetts Institute of Technology (MIT)</b> <i>B.S. in Electrical Engineering and Computer Science</i> <i>Minors in Mechanical Engineering, Comparative Media Studies</i>	<b>June 2017</b> <i>Cambridge, MA</i> <i>GPA: 4.9/5.0</i>

## WORK AND RESEARCH EXPERIENCE

<b>MIT Computer Science &amp; Artificial Intelligence Lab., Distributed Robotics Group</b> <i>Researcher with Dr. Daniela Rus</i>	<b>2016 – present</b> <i>Cambridge, MA</i>
--	---

- Designed electrically-powered soft robotic actuator based on chiral shear auxetic patterns
- Mechanically characterized force output and compliance of actuator, creating biomimetic fingers and tentacles

<b>Toyota Research Institute</b> <i>Robotics Intern</i>	<b>2017</b> <i>Cambridge, MA</i>
--	-------------------------------------

- Designed automated mechanical testing rigs to evaluate performance of new soft tactile sensor against simulation
- Created new silicone-based tactile skin and performed experiments on mechanical adhesion and accuracy
- Explored current tactile sensing solutions - contacting manufacturers and recreating academic prototypes

<b>Massachusetts Institute of Technology, Department of Mechanical Engineering</b> <i>Researcher with Dr. John Hart</i>	<b>2014 – 2017</b> <i>Cambridge, MA</i>
--	--

- Created machine vision algorithms in C++ for dynamic photolithography system, increasing speed of tracking, detection and encapsulation by 300% with multithreading, Kalman filters and bit plane splicing.
- Performed encapsulation experiments on liver hepatocytes in photopolymers for tissue engineering applications.
- Adapted photolithographic system to a robot arm, enabling accurate micropatterning on macro-scale objects. Improved scanning system's accuracy and designed mechanical enclosures for electronic / optical systems.
- Designed and printed NFC circuits to test capabilities of photolithography system for flexible circuits
- Analyzed performance of various particle detection and tracking algorithms in simulated and actual conditions.

<b>Apple</b> <i>iPad Hardware Systems Integration, Electrical Engineering Intern</i>	<b>2016</b> <i>Cupertino, CA</i>
---	-------------------------------------

- Designed schematic and PCB in Cadence for internal project board involving high-speed signals.
- Wrote TCL scripts to validate functionality of SoCs. Deployed this test suite on SMT, FATP and REL lines in China.
- Performed power validation and signal integrity measurements on low and high speed signals, including I2C and SPI.
- Wrote scripts in Lua, C++ and Python for internal eye diagram measurements & thermal experiments on battery life.

<b>Square</b> <i>Electrical Engineering Intern</i>	<b>2015</b> <i>San Francisco, CA</i>
---	---

- Wrote C code for NFC card proximity detection, part of firmware needed to pass contactless payment certification
- Tuned NFC antennas with VNA and SMT rework skills, enabling proposal of new antenna design directions
- Wrote Python script to send HCI commands to Bluetooth chip, validating results with spectrum analyzer
- Created preliminary schematics and PCB layout for new NFC board in Altium

## PROJECTS

For pictures and more detailed information, please go to <http://lillych.in>

<b>2.72 - Elements of Machine Design</b>	<b>2016</b>
--	-------------

Desktop lathe that maintained 50 micron precision even after being dropped. Won first place for highest accuracy

<b>MIT Mobile Autonomous Systems Laboratory</b>	<b>2016</b>
---	-------------

Cube-stacking autonomous robot. Won first place, best software, best wiki and "most likely to be staff" award

<b>MakeMIT</b>	<b>2014</b>
----------------	-------------

Guitar-playing robot that uses solenoids to strum and a rack-and-pinion setup to fret. Won first place.
